

KEY SERVICES:
CON/STEEL

> **TILT-UP**

LJB's experience, expertise and continual innovation in tilt-up design has made us a leader in the growing tilt-up industry.

> **NETWORKING**

Because CON/STEEL Alliance members operate on an exclusive territory basis, they are encouraged to share best practices, leads and clients. CON/STEEL facilitates networking groups to promote this sharing and allow each member to tap into a wider range of experiences and resources.

CON/STEEL originated as a group of structural engineers designing tilt-up buildings for a select group of clients. These relationships have evolved into lasting partnerships, giving birth to the CON/STEEL Alliance.

It goes beyond just designing great buildings – CON/STEEL becomes a true business partner with each Alliance member.

LJB Inc.'s CON/STEEL program has been producing tilt-up buildings since the early 1970s. Today, standard details and economized design practices learned from decades of experience translate into efficient field production and higher quality construction.

Each CON/STEEL contractor has exclusive rights to its geographic market, which provides motivation for all Alliance members to share their expertise and the latest innovations in design and construction.

BENEFITS

- > Tilt-up experts readily available to address design concerns and field challenges
- > Standard details allow contractors to quickly and accurately estimate and construct projects
- > Long-term relationships facilitate coordination and problem solving
- > Industry involvement and internal peer groups keep Alliance members abreast of the latest developments to save money and enhance quality
- > Research and development programs keep contractors on the forefront of construction technology
