

KEY SERVICES:

ENVIRONMENTAL SCIENCE

WHO WE SERVE

> CLIENTS INCLUDE

- > Developers
- > Municipalities
- > State & county agencies
- > Department of Defense
- > U.S. Army Corps of Engineers

LJB provides timely and accurate environmental services to meet the needs of federal, state and local regulations while keeping a project on schedule.

Concern over the quality of our environment continues to increase. LJB has an integrated team of environmental scientists, biologists, cultural resource specialists, environmental planners and engineers that work together to monitor and implement environmental rules and regulations that ensure our clients are compliant. We routinely prepare purpose and need statements, conduct alternatives analyses, advise clients on managing recognized environmental conditions, and identify the environmentally preferred alternative for proposed projects.

When property is transferred, infrastructure is expanded or a new site is ready to be developed, environmental compliance is necessary. At LJB, we understand there are many unknowns in environmental investigations and we have the professionals and experience to handle whatever is uncovered.
