

KEY SERVICES:

FALL PROTECTION

> WHAT MAKES LJB DIFFERENT?

> Dually registered P.E.s and C.S.P.s

This attribute allows our clients to expend less effort coordinating these distinct disciplines. Unlike many professional engineers, our advanced safety knowledge leads us to consider essential safety issues, such as fall clearance, swing fall and appropriate system selection.

> Objective viewpoint on equipment

LJB has always maintained a policy of unwavering independence from equipment manufacturers, which is critical to our continued objectivity as consultants. This attribute results in the best overall cost solution since we are not trying to solve a problem with a specific product.

> ANSI Z359 committee involvement

LJB clients receive the most recent and accurate information available since our design professionals serve on the ANSI Z359 committee for fall protection. This attribute decreases the likelihood of future changes in equipment specified and anchorages designed as a result of revisions in regulations and standards.

Despite continual advances in the fall protection industry, falls still account for a significant number of workplace injuries every year. Complex regulations and unsafe conditions make it difficult for the untrained to properly protect themselves and their workers.

As safety consultants, our goal is to improve safety and reduce risk for work at heights. We can provide the following important services to assist you in developing and maintaining a comprehensive managed fall protection program.

KEY SERVICES

> POLICY DEVELOPMENT

Creating a fall protection policy is foundational, and LJB has the expertise to assist with this important step. We serve as an extension of your staff by acting as a trusted advisor and educating you on regulations, standards and resources.

> TRAINING

In our awareness, authorized, competent and qualified person training programs, we instruct on much more than equipment. Combining regulations, standards and practical examples with equipment, LJB's training is hands-on and comprehensive.

> FALL HAZARD RISK ASSESSMENTS

LJB works with your staff to identify and prioritize hazards, providing a valuable tool to help you best allocate your resources, improve safety and reduce risk.

> HAZARD ABATEMENT DESIGN

When working toward a fall protection solution, LJB provides conceptual design, final design and drawings for implementation. Producing conceptual designs allows for thorough evaluation and buy-in from the team before investing in a solution.

> PROGRAM SUPPORT

In addition to the services listed above, LJB also provides ongoing system certification, equipment inspection, incident investigation and overall program evaluation to maximize the effectiveness of any fall protection program.
