

MARKETS:
INDUSTRIAL

MARKET SEGMENTS

> PETROLEUM

Petroleum producers face unique safety challenges that LJB has firsthand experience addressing. We provide one trusted source for all fall protection needs, including training, hazard identification and hazard mitigation. Plus, LJB has the unique ability to provide unbiased engineering judgment since we don't sell or manufacture fall protection equipment.

> CONSUMER PRODUCTS

The majority of projects for consumer product manufacturers involve improvements to enhance production. LJB provides innovative solutions to address challenges inherent to manufacturing.

> AUTOMOTIVE

It is critical that automotive plant renovation projects be designed to have minimal impact on productivity during construction. Our safety professionals, engineers and architects thrive in this environment.

Although process drives industry, it's people behind the scenes who are making processes work. LJB understands this dynamic and the unique, fast pace of industrial facilities.

LJB traces its beginnings to the industrial marketplace and relishes the long-term relationships we have maintained. Experience has taught us that a sketch today is often more valuable than a detailed drawing tomorrow in this fast-paced market. We know that our job is to recommend a solution that achieves the desired results.

With a diverse staff that understands the latest techniques and standards in architecture, structural, environmental and safety engineering, LJB can readily assist in-house design, production and maintenance personnel in the most efficient and helpful ways—truly becoming an extension to your staff.
