# SAFETY ENGINEERING

## KEY SERVICES

### > FALL PROTECTION

By incorporating fall protection, costs can be lowered, task performance improved and life-threatening work hazards reduced.

- > New Facility/Renovation Design
- > Hazard Surveys
- > Training

### > CONFINED SPACE

LJB safety engineers partner with you to relieve the hazardous conditions that can make working in a confined space dangerous for workers.

- > Space Evaluations
- > Procedural Recommendations
- > Rescue Plans

LJB's dually registered professional engineers and certified safety professionals give us a unique perspective to ensure that the critical, but distinct, aspects of engineering and safety are considered.

Increasing safety in any company is a winning proposition, especially considering the risks. Despite the misconception that adding safety adds cost, safer environments translate into enhanced efficiency and cost effectiveness for facility construction, maintenance and use.

LJB integrates engineering, architecture and safety disciplines to design out or provide protection for all hazards. LJB professionals balance design principles, human factors and client needs to develop the most appropriate solutions.
