

KEY SERVICES:  
**SAFETY BY DESIGN**

## KEY SERVICES

### > SAFETY ENGINEERING

LJB's dually registered professional engineers and certified safety professionals give us a unique perspective to incorporate increased safety into the design of new projects without damaging structures or budgets.

### > STRUCTURAL ENGINEERING

Besides designing to ensure stability, security and safety for your new projects, our structural engineers work with you so that your designs work for you.

This innovative blending of safety with engineering and architectural design provides cost savings, improved performance and enhanced safety.

Conventional wisdom says that incorporating state-of-the-art safety features into a new project would significantly increase the cost. The safety professionals at LJB challenged that thought more than a decade ago.

We have found that incorporating safety into the design process can have a positive impact on a company's safety, quality and productivity. Costs can be lowered, task performance improved and life-threatening work hazards reduced. Cost benefits are maximized when applied at the earliest stages, but owners will experience benefits when safety is considered at any stage in the project continuum.

## MARKETS SERVED

### > FEDERAL

Our team is purposefully diverse and flexible to meet the ever-changing needs of federal clients.

### > PETROCHEMICAL

Our varied experience and expertise has been employed on many challenges presented by the petrochemical industry. We are at our best when the task requires an original solution.

### > COMMERCIAL

In a market that rapidly changes, LJB can serve as a trusted advisor—ensuring that you stay aware of safety requirements while you focus on your business.

### > PUBLIC

LJB is perfectly matched to serve the public market—coupling diverse safety services with a focus on people and communities.
