

DISCIPLINES:  
**STRUCTURAL ENGINEERING**

> **KEY SERVICES**

- > New structures
- > Renovations
- > Retaining walls
- > Deep foundations and sheet piling
  
- > Structural condition evaluations
- > Load rating
- > Construction inspection
  
- > Material handling and crane systems
  
- > Equipment foundations and supports
- > Mezzanines and storage facilities
- > Roof and floor truss reinforcement
  
- > Specialty structural services
  - Fall protection
  - Bridge
  - Tilt-up

LJB's creative and determined engineers have extensive training and experience, which allows them to tackle the most complex structural challenges. So, your business is your focus—not your building.

By immersing ourselves firsthand in your project, we know the challenges you face in running your business during construction projects. LJB engineers watch and listen to transfer that understanding into design solutions.

Although the work of structural engineers is often invisible, we take the responsibilities that come with structural design very seriously. And, we know that although our core responsibilities revolve around creating safe buildings and bridges for citizens, we realize that we can do much more. We provide owners with efficient and functional designs for increased savings and productivity. And, we provide contractors with "buildable" designs that easily translate into effective field production.
